Best Web Browsers for Privacy

Desktop

Firefox

Recommended for Privacy.

LibreWolf

Recommended for Full Privacy. I recommend you to download the Libre-Wolf config files from its GitLab repository and add them to your Firefox web browser.

Android

Bromite

Bromite is a *fast & lightweight browser*, based on Chromium that provides an option for changing your browser timezone. it has it's own adblocker. However this adblocker doesn't block Ads like *Ublock Origin & AdGuard Blocker*, but it is effective most of the times.

It is recommended to change your *Browser User Agent* to increase your privacy.

How to Prevent DNS Hijacking

The only thing you need to do is to change your *DNS Server* and select a *DNS Server* that supports one of these protocols :

DNS over TLS (DOT)

DNS over HTTPS (DOH)

DNSCrypt

Most of the websites are blocked with DNS Hijacking (Also known as *DNS Poisioning*) , so you can easily acces them with this method. Some countries (Iran, China , ...) block the DNS Servers that support these protocols.

Privacy & Full Privacy Extensions

This is a *List of Best Extensions* for two type of users.
Users who are concerned about their *Privacy* should install all Extensions mentioned in *Full Privacy* section.

1   Privacy

These *Extensions* are suitable for day to day use. This combination doesn't *break* websites.
